-

UNIVERSITY PROJECTS

- Point Of Sale System (POS in C# programming Language)

Project Description :

Designed and implemented a POS for a small business. Collaborated with a team to plan the Software architecture. The Point of Sale (POS) System is a C# desktop application for retail sales management. It features real-time calculations, multiple payment methods, and secure user authentication.

Achievements :

- Successfully Developed a robust C# application to streamline retail sales transactions, enhancing operational efficiency.
- Integrated real-time inventory management.
- Implemented secure user authentication and role-based access control, ensuring data security and reducing unauthorized access.

EXPERIENCE

- YouTube
- YouTuber Since 2021

Content creator managing a successful YouTube channel. Skilled in video production, editing, and audience engagement.

- Shop Owner (2017-2023)
- Self Employed

Managed daily operations, including inventory management, customer service and staff supervision.

Implemented efficient processes to enhance business performance and customer satisfaction.
